

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

plates of the bird together with several of the last individual, taken from life, and after it had been mounted by the late Nelson R. Wood. Incidentally he states that the plates of Wilson's 'Ornithology' were engraved by Warnicke but we are at a loss to know what authority he has for the statement. If the great majority of them are not the work of Lawson it is high time that proof of the fact were presented.—W. S.

**Lincoln's Instructions for Bird Banding.**<sup>1</sup>—This is a clear and concise series of instructions on how to band birds, how to catch them for banding and study, and how to keep the necessary records. So many important problems can be solved by thus tagging birds, and keeping records of their recapture at the same place or elsewhere, that the Biological Survey has adopted the practise as one of its regular lines of research and volunteers are solicited to aid in the banding. The present pamphlet is issued especially to furnish the necessary instructions for carrying on the work. It seems to admirably fill the requirements.—W. S.

**Murphy on the Sea Coast and Islands of Peru, IV and V.**<sup>2</sup>—Dr. Murphy continues in the 'Brooklyn Museum Quarterly' his interesting account of his recent trip to the Peruvian coast. One installment deals with the Chincha Islands and the Guano industry and is prefaced with an account of a visit there fifty years ago by Dr. Frederick A. Lucas, which was written at Dr. Murphy's request to contrast conditions at that time with those of today. The other installment relates to the ancient mummies of the coast region and to Independencia Bay where the Chilean Flamingo was found.—W. S.

**Speck on Bird-Lore of the Northern Indians.**<sup>3</sup>—This is a delightfully written account of the fables and beliefs of the Penobscot Indians which relate to the wild birds. The Great Auk we learn was regarded as the chief of a tribe which is visited by the chief deity of the Penobscots when his uncle desires to secure a wife. The Petrel's name in the Penobscot language means "picking up grease," referring to the bird's habit of skimming the surface of the water. The Owls, to the primitive Indian mind, were of deep portent and almost all the species are distinguished by name.

The Redstart is "little fire," and the Thrushes, "birds of evening,"
